Geometry e-ako

- Go to the measurement pathway in e-ako maths
- Choose e-ako M3.8 8th yellow button; 3rd row)
- Work through pages 16-30

Task

Mrs Carroll uses 5L of fuel per day to drive to school and back. Mrs Fardel uses $4\frac{3}{4}$ L of fuel per day to drive to school and back and Mrs Barclay uses 5.75L of fuel per day to drive to school and back. If you filled a cubic metre with fuel, how many school days would pass before each person used the amount of fuel that would fit inside a 1m^3 container? Who would empty the container first?

Now try this ...

How many school weeks would the fuel last each person?
